

The anchor sheet

Every current recommendation, in the order the Monday run sheet works through them · Youngstown Business Incubator, FY2025 · generated 17 September 2026

- What this is.** Nine documents in `docs/` carry recommendations and none of them is ordered the way the work is actually done. This is the same set, dealt into the sequence of `docs/MONDAY_RUNBOOK.md`, so each one can be checked against the screen it is visible on at the moment it applies.
- Every figure below was read from the live record** when this was generated — none is recalled, and nothing on the page is computed. Regenerate it any time with `scripts/monday_anchor.py`; a figure it cannot read stops the run rather than printing blank.
- The tick boxes are the QA.** Tick a recommendation when you have seen its figure on the screen named beside it. One that does not match is the point of the exercise — note it rather than reconciling it in your head.

STEP 0

Before you open anything

Five figures. If any has moved, stop and find out why.

☐ **R1 Confirm the record is where this sheet says it is**

/ — the landing page

Before anything else, read the five state figures off the screens and tick them here. If any one of them differs, stop and find out why — every recommendation below is written against this state.

11 of 11 control points tie	6 reconciling items recorded
757 of 757 groups classified	\$0.00 unclassified, 100.0%
sealed by Tom Metzinger	12 Sep 2026 22:50 UTC, covering 757 live judgments
INDIRECT_COMBINED 22.48%	administrative labour on the POOL basis
4 of 4 rate anchors tie	every pool at pool_variance 0.00

Watch: A figure that has moved since Friday is not automatically wrong — somebody may have done the QuickBooks reposting. It is a reason to re-read, not to proceed.

STEP 1

Confirm the books still agree · /reconcile

The gate on everything downstream. A rate over books that do not agree with themselves is a rate over the wrong numbers.

Reconciliation

A-1

Eleven points at which the general ledger, the profit and loss, the balance sheet and the payroll register are required to agree. Run before anything is classified, because a reconciliation produced after the rate is one nobody can believe.

Cross-reference points

11

Tying

11

Named reconciling items

6

52,523

Controls

Ledger vs P&L (5)

Ledger vs balance sheet (4)

Reconciling items (6)

The register

What it proves	Ledger side	Statement side	Left over
✓ Profit and loss foots to the net income the sheet carries PL_FOOTING	P&L sections 4,329	Balance sheet net income 4,329	0
Net income as the P&L computes it must equal what the sheet carries in equity. Two exports that disagree are two different moments in the same books, and everything built on either is suspect.			
✓ Balance sheet balances BS_FOOTING	Assets 16,713,220	Liabilities and equity 16,713,220	0
Assets less liabilities and equity.			
✓ Every staged line reached the ledger GL_PROMOTE_COMPLETE	Dated lines staged 15,500	Lines in the ledger 15,500	0
The promote path dedupes on each line's natural key. When two genuinely different lines hash alike one is dropped and nothing raises: 71 lines carrying \$24,082.67 went that way before the key learned to number repeats. This counts them.			

Where to look — the top of the screen, which is where the figures sit. This is the sandbox walk, built from an empty database: the layout is the screen you will open, the figures on it are not. The live figures are in each card below.

☐

R2

Keep all eleven control points tying before any rate is touched

/reconcile — Schedule A-1

All 11 tie today. Confirm they still do. `POST /api/rates/compute` returns 409 while any one is open, and that gate is correct: a rate over books that do not agree with themselves is a rate over the wrong numbers.

state	11 TIES
reconciling items	6 recorded

Watch: A difference is closed by naming the lines behind it, never by netting it. NO DATA is not a pass.

☐

R3

When the Bacon credit is reposted in QuickBooks, take the reconciling item off with it

/reconcile — PAYROLL_REGISTER

The \$45,053.23 donor credit sitting in an intern wage account is confirmed and named, not netted — it is why the fringe rate reads 21.90% over the payroll register rather than 22.45% over the ledger's wage accounts. It has not been reposted. **When it is, the reconciling item has to come off in the same pass or the correction counts twice.**

the eleventh control	PAYROLL_REGISTER, the only one of the eleven that touches the register
today	TIES, with the difference named

The reconciling item is computed from the live difference, so it lands on its own — but the item itself stays until somebody removes it.

Watch: This is the change most likely to have happened over the weekend. Check it before anything else.

Review what stands • /classify

This is the work. Every judgment has a written rationale in docs/CLASSIFICATION_LOG.md; these are the ones carrying the weight.

Where to look — the top of the screen, which is where the figures sit. This is the sandbox walk, built from an empty database: the layout is the screen you will open, the figures on it are not. The live figures are in each card below.

☐ **R4 Portfolio consulting stays in the base as contractor cost**

/classify — search 5227

These consultants deliver into YBI's own incubation programme against YBI's scope, which makes them **contractors, not subrecipients** — so the whole amount counts in MTDC rather than only the first \$25,000. That is the point of putting it there: YBI selects, scopes, administers and carries the other half, and that administrative effort is what the G&A pool recovers on.

as judged	DIRECT, \$588,538.89 net
gross movement	\$2,475,106.33 over 442 lines

2 CFR 200.331

Watch: Reading them as subrecipients instead takes cost **out** of the base and the combined rate **up**, to about 50.23%. The conservative reading of a classification can be the aggressive reading of the rate.

☐ R5 Depreciation is OVERHEAD and its federal treatment stays PENDING

/classify — search 5010

The pool is not in doubt — depreciation is occupancy cost. The **claim** is: 200.436(b) makes depreciation on a federally funded asset unallowable, and the fixed-asset schedule has no funding-source column at all. PENDING puts the cost where it belongs and leaves the claim open, which is what is actually true. **Do not flip it to ALLOWABLE to tidy the screen.**

as judged	OVERHEAD, federal PENDING
amount	\$850,382.89

2 CFR 200.436(b); the missing column is itself a finding under 200.313(d)(1)

Watch: This is the largest single figure in the file that no amount of reading the ledger can settle.

☐ R6 The wage accounts are EXCLUDED on purpose — do not make them DIRECT

/classify — search 5140 and 5142

compute already feeds the payroll register into the base through the effort distribution. A DIRECT judgment on the wage accounts would add the payroll to a base that already carries it, and **every indirect rate over that base would read low by the width of the payroll**. EXCLUDED is not 'this is not cost' — it is the pool enum's word for cost the pools must not carry.

5140 Employee Wages	EXCLUDED, \$1,678,157.27 net
5142 Intern Wages	EXCLUDED, \$111,836.67 net

Watch: This is the judgment on the queue that looks most obviously wrong and is most obviously right.

☐ R7 Other Income is EXCLUDED and PENDING — and part of it is a liability

/classify — search 5108

\$105,865.41 of it is a **Q1 2020** Employee Retention Tax Credit received from Staffmark in May 2025. A credit relating to a period in which federal awards bore the wage cost is owed back to those awards — and which 2020 awards bore them is not on this record. **Treat it as a liability to establish, not as income received.**

as judged	EXCLUDED, federal PENDING
amount	\$110,182.87

2 CFR 200.406(b)

Watch: Other Income stays in classification scope on purpose: 200.406 makes applicable credits a reduction of cost rather than revenue, so somebody has to look at these.

☐ R8 Read the inventory journal entry behind Cost of Goods Sold

/classify — search 5001

Classified DIRECT to Xjet on inference. Its own description points at the answer — *'Used Inventory (See JE for breakdown)'* — and nobody has opened it. **The cheapest item on any of these lists to settle**, and the only one that can be closed in an afternoon without asking anybody outside the building.

as judged	DIRECT to XJET
-----------	----------------

amount	\$37,261.00
--------	-------------

☐ R9 Split the insurance policy schedule — it moves what gets carved

/classify — search 5075 Insurance

All of it is in OVERHEAD. Both halves are indirect, so **this does not move the combined rate** — but OVERHEAD is carved for tenant space and G&A is not, so the general-liability share is being carved when it should not be. The policy schedule splits property from general liability; nobody has applied it.

as judged	OVERHEAD, \$57,596.36 over 13 lines
-----------	-------------------------------------

where it would split	property to the facilities pool, general liability to G&A — 7300 and 8300 in the 2026 chart
----------------------	---

[2 CFR 200.465](#)

Watch: Worth doing **before** the square footage arrives, not after — otherwise the first real measurement carves the wrong pool.

☐ R10 Payroll processing fees stay in G&A — unless you say otherwise

/classify — search 5137

It is arguable: this is the cost of administering the payroll the fringe pool pays for, and moving it into fringe is worth about 0.29 points. It is left in G&A because the six fringe accounts are a **transcription of a judgment somebody made once** off the face of the P&L, and inventing a rule to derive that judgment would be guessing at it. **This is a controller's call, not the system's.**

as judged	G&A, \$5,236.70 net of \$6,526.70 gross
-----------	---

the six fringe accounts	5130 Benefits · 5133 401k · 5145 BWC · 5151 FICA · 5185 FUTA · 5195 SUI
-------------------------	---

[2 CFR 200.431\(b\)](#)

Watch: There is no holiday, PTO or leave account anywhere on this P&L — YBI pays leave as regular compensation, so leave is already inside the fringe denominator. Adding anything leave-shaped to the numerator would count it twice.

☐ **R11 The judgments stand on reconstruction, not on documents**

/worklist — NEEDS_EVIDENCE

Every one of the 757 carries a written rationale in docs/CLASSIFICATION_LOG.md, and almost none carries a cited document. That is honest and it is also the ceiling: **attaching a document is not citing one**, and VERIFIED needs a citation on the judgment itself. Nothing here blocks Monday; it is what an auditor will ask about first.

grades on live judgments	748 management reconstruction · 9 corroborated

Rates

D

Sealing hashes every live classification and freezes the set. Only then can a rate be computed, and the rate carries the seal — so it can be shown to be a consequence of the judgments rather than a target they were fitted to.

Sealed

Sealed by Tom Metzinger — classifications can now change only by unsealing, which supersedes the rate

Dollar coverage

100.0%

Groups left

3

80% target

The base is complete enough to seal.

☒

The books agree with themselves — all 11 cross-reference points tie.

Unseal...

Compute the rate

Computing reads the sealed judgments and writes the rate against that seal. It is arithmetic, not a judgment — the judgment was sealing. Recomputing supersedes the rate on file rather than editing it.

Administrative labour —

a cost objective (YBI-GA bears indirect)

2 CFR 200 Appendix IV B puts the director's office, accounting and personnel administration in the G&A pool. Treating it as an objective allocates the indirect pool to its own administration, which recovers from nobody. It is recorded on the rate either way, so the workpaper says which was chosen.

Computed rates

Where to look — the top of the screen, which is where the figures sit. This is the sandbox walk, built from an empty database: the layout is the screen you will open, the figures on it are not. The live figures are in each card below.

☐ **R12** Leave the seal alone unless a judgment actually changes

/rates — the seal card

The seal is the assertion that the rate was not reverse-engineered, and it is the whole reason a reviewer can be told so. It already covers every live judgment. **Unsealing supersedes every rate computed against it** — so unseal only to correct something, with the reason written down, per §C of the runbook.

sealed	12 Sep 2026 22:50 UTC by Tom Metzinger
covering	757 live judgments, set '2025 build'

Watch: Only CONTROLLER may seal or unseal, and nothing automated may do either. A machine that sealed would put its own name on the assertion and the assertion would be worth nothing.

STEP 4

The rate • /rates

Already computed. This matters only if the change path runs.

Unseal...

Compute the rate

Computing reads the sealed judgments and writes the rate against that seal. It is arithmetic, not a judgment — the judgment was sealing. Recomputing supersedes the rate on file rather than editing it.

Administrative labour —

in the G&A pool (it is the indirect)

2 CFR 200 Appendix IV B puts the director's office, accounting and personnel administration in the G&A pool. Treating it as an objective allocates the indirect pool to its own administration, which recovers from nobody. It is recorded on the rate either way, so the workpaper says which was chosen.

Computed rates

Where to look — the top of the screen, which is where the figures sit. This is the sandbox walk, built from an empty database: the layout is the screen you will open, the figures on it are not. The live figures are in each card below.

☐ **R13** If you recompute for any reason, choose POOL again

/rates — the compute card

The basis selector **defaults to OBJECTIVE**, which is what every rate before migration 068 used. On the same sealed judgments that is 34.82% instead of 43.99% — nine points, chosen by leaving a dropdown alone. The basis is recorded on the rate, so the workpaper says which was used.

on file now

admin_labour_basis = POOL

computed

17 Sep 2026 13:46 UTC by Tom Metzinger

Watch: There is nothing to recompute today. This matters only if §C runs.

☐ **R14** General administration belongs in the G&A pool, not beside it

/rates — admin labour basis

Modelling YBI-GA as a cost objective **allocates the indirect pool to its own administration**, which recovers from nobody. The director's office, accounting and personnel administration are pool cost. FUNDRAISING and UNALLOWABLE-ACTIVITY stay objectives on purpose — 200.413 makes them bear indirect while recovering nothing, which is the opposite case.

the decision

DECIDED — in the pool

as computed

22.48% on a \$4,736,602.11 base

[2 CFR 200 Appendix IV B; 200.413](#)

Watch: The hours log settles the counter-argument: all ten people carrying YBI-GA wages split their time across named programmes, so it is a real assignment rather than the bucket unattributable time went into.

Where to look — the top of the screen, which is where the figures sit. This is the sandbox walk, built from an empty database: the layout is the screen you will open, the figures on it are not. The live figures are in each card below.

☐

R15 Quote 22.48% and 21.90% as a pair, and say what is not in them

/review/rate — the build-up

These are the two figures that leave the building. Quote them together, with the caveat above the figures — whatever the walk says is still unfinished belongs above them, not in a footnote. The 200.465 carve-out is in it: 6 row(s) over 5 measured facility(ies).

FRINGE	21.90% · pool \$401,783.60 over \$1,835,047.17 SALARIES_WAGES
OVERHEAD	10.11% · pool \$479,021.14 over \$4,736,602.11 MTDC
G&A	12.37% · pool \$585,875.91 over \$4,736,602.11 MTDC
INDIRECT_COMBINED	22.48% · pool \$1,064,897.05 over \$4,736,602.11 MTDC

Watch: 4 of 4 pools tie to the ledger at pool_variance 0.00, and 4 of 4 rate anchors tie. Nothing on that screen is computed.

☐ **R16 The fringe rate does not move — it is anchored at both ends**

/review/rate — the fringe row

The numerator is the six accounts the P&L names as fringe and the denominator is the payroll register. **21.90% falls out; it was not put in.** Writing it in as an input would be exactly the reverse-engineering the seal exists to rule out. It holds in every scenario that does not move an account into the fringe pool.

pool	\$401,783.60
over the register	\$1,835,047.17
the alternative denominator	the ledger's wage accounts, understated by the \$45,053.23 credit, which gives 22.45%

Watch: If anybody quotes 22.45%, they are on the ledger's wage accounts rather than the payroll register. One pool, two denominators, and only one of them is the payroll.

☐ **R17 Nothing goes to NCDMM before the square footage lands**

/review/rate — the carve-out row

The carve-out has fired: 6 row(s) against 5 measured facility(ies), on an overhead pool of \$479,021.14. What is still open is whether the estate on the record is the **measured** one — a floor plan filed and not accepted moves no figure — and every square foot that moves from let to programme puts occupancy back in the federal pool and the rate back up.

carve-out rows recorded	6
facilities with measured space	5
worth	about ±16 points of the combined rate

[2 CFR 200.465](#)

Watch: Nothing distinguishes *there is no tenant space* from *nobody has measured any*. The carve-out ties to itself either way, which is why this is on the sheet rather than on a control.

☐ **R18 Fix the tenant double-count before the square footage is applied**

/review/rate — before the measurement arrives

Named tenants **already reimburse into the OVERHEAD accounts**, so the pool is partly net of tenant recovery before any carve-out is computed. Carving a square-footage share on top of that removes the same money twice. It errs against YBI, which is why it is a recommendation rather than a silent change — but it has to be settled **before** the first real measurement, not after.

credits inside the OVERHEAD pool	\$133,998.11
of which carry a named payee	\$100,931.51
the rest	no payee — including a reclassification and an insurance recovery for parking-lot damage, which are not tenant recovery at all

[2 CFR 200.465](#)

Watch: Which credits are tenant recovery is a judgment, and so is whether a square-footage driver should reach the T1 access, telephone, insurance and equipment sitting in the same pool.

None of it blocks the five steps above

Help

Good to see you, Tom Metzinger

Classification, the seal, and the rate that follows from it — in that order, which is the order the audit file rests on.

What is waiting on you

You hold CONTROLLER, so this is everything — each row says whose work it is

What	Items	Amount	Whose	
✖ Effort not yet certified Only the person whose effort it was can sign	43	1,835,047	PROJECT	Open
✖ Cost to classify In P&L scope, with no live decision	3	7	CONTROLLER	Open
✖ Square footage not on file The facilities carve-out is sized by area	1	—	FACILITIES	Open
⚠ Judgments with no document Federally chargeable, nothing cited	360	3,425,498	OFFICE	Open
⚠ Employment terms missing No weekly hours to measure a timesheet against	43	1,835,047	PROJECT	Open
⚠ Invoices with no award No ceiling to test against	21	1,250,124	PROJECT	Open
⚠ Invoices billing no indirect Recovery forgone on the face of it	21	766,657	PROJECT	Open

Where to look — the top of the screen, which is where the figures sit. This is the sandbox walk, built from an empty database: the layout is the screen you will open, the figures on it are not. The live figures are in each card below.

☐ R19 Chase the roster reply first: it blocks every timesheet

/requests — the roster

No employment terms are on the record for anybody, so no timesheet draft can be built for anybody. v_employment_expected is the denominator every effort percentage is measured against. Twenty hours a week is the whole of a half-time job and half of a full-time one, and nothing on the record can tell which.

employment rows	0 — for 43 people in the distribution
and without an account at all	40 of 43 — the reply carries the addresses these are opened against
outstanding	43 EMPLOYMENT_UNKNOWN

Watch: A blank defaulted to 40 hours would understate every part-timer by exactly the amount that matters. A partial answer is no row rather than a partial one.

☐ **R20 The certifications are the longest pole, and nobody can sign for anybody**

/certify · /timesheet

This does not change a figure in the rate; it changes whether the rate is **usable**, because 200.430(i) goes to the allowability of the entire direct labour charge. A reconstruction the person reads, corrects and signs meets the rule; one nobody ever saw does not, which is where 2025 has been sitting. A manager's list (**v_certification_chase**) is a list to go and ask, never an action.

certifications	0 of 43
timesheet entries	0
two gates, not one	40 of 43 have no account to sign in with, and nobody has employment terms — both come out of the one roster reply, and the accounts are Barb's to open after it lands
outstanding	43 NEEDS_CERTIFICATION

2 CFR 200.430(i)

Watch: Adopting the reconstruction faithfully reproduces its shares, so **submitting does not move the rate**. If it did, the rate would depend on who had got round to signing.

☐ **R21 The square footage is the largest open item and gates nothing upstream**

/facilities

Worth saying plainly because it is the question that gets asked: **it does not gate any classification**. In the 2025 chart occupancy goes to OVERHEAD full stop and the tenant share comes out at rate time as a carve-out. The square footage is the *carve-out's* problem. The 2026 chart books tenant cost straight to 93xx, so from next year it is booked rather than estimated.

facilities on the record	5
worth	about ±16 points — one form, linear in the tenant share

2 CFR 200.465

Watch: Take R18 first, or the first real measurement produces the wrong answer.

☐ **R22 Four decisions that are Barb's and nobody else's**

docs/BARB_ONE_PAGE_AM.pdf

Whether YBI raises its own two over-collections first and unprompted; who opens with NCDMM and when; whether the 43 certifications get pushed from the top; and whether anybody looks at 2024. None of these is arithmetic and none can be staged.

the awards began	2023 and 2024 — this exercise covers 2025 only
if 2024 was billed the same way	the same exercise applies to it, and nobody has looked

THE INVOICE REGISTER

New since this sheet was first written

61 invoices, the whole of 2025, reconciled to the ledger. Three of the cards below it were built on three invoices from one month.

☐ **R30 The register is the year now, not a sample of it**

/contracts · the invoice register

It held **three invoices from one month of 2026**, and four published figures were computed against it as though it were the year — *1.6% of the ceilings has ever been invoiced, \$936,190.52 of cost never invoiced, Digital Engineering has no invoice to restate against at all*. All three were wrong. A register loaded from one document is a sample until something says otherwise.

RISING-TIDES	9 invoices · \$937,073.07 · no indirect line on any of them
DRIVE-AM	12 invoices · \$579,240.87 · no indirect line on any of them
DIG-ENG	7 invoices · \$579,074.25 · no indirect line on any of them
LTM	12 invoices · \$368,222.24 · indirect \$44,400.00
AAMEN	12 invoices · \$313,050.84 · no indirect line on any of them
HYBRID-II	9 invoices · \$187,416.05 · no indirect line on any of them
all of 2025	61 invoices, \$2,964,077.32, 61 stating a payment received

Watch: The ledger is the control, not the parser: 3900 Grant Income records the same billing independently and six of the seven streams agree, four of them **to the cent**. The two that differ are named — Hybrid's \$4,222.00 tail and Rising Tides' 2024 portion.

☐ **R31 A restatement rebuilds; it does not add**

/restate

The route applied the rate to the invoice's **own** base, and that base carries labour already holding embedded indirect — YBI's Hybrid cost proposal computes \$45,457 of 10% ICR into a \$449,043.40 labour line. It read **\$435,301.76 owed to YBI** where the rebuild shows **\$286,793.73 owed back**. Migration 076 records the rebuild as the position and keeps the old reading beside it, labelled.

DRIVE-AM	position \$-128,474.23 · as-billed would say \$143,130.42
DIG-ENG	position \$-320,427.12 · as-billed would say \$0.00
LTM	position \$43,960.60 · as-billed would say \$35,616.48
HYBRID-II	position \$-72,947.07 · as-billed would say \$46,310.51

2 CFR 200.414(f)

Watch: The rebuild reproduces both published workpapers to the cent — LTM \$107,683.52 and Drive AM \$(58,786.31). That is the check; the route agreeing with itself would not be.

☐ R32 What was actually recovered, against the 10% elected

/restate — the implied rate

Every award carries the de minimis election, and it is written down in exactly two places: **Last Tactical Mile's executed Schedule B** budgets 10.0000% of total direct to four decimal places, and **Hybrid Phase 2's cost proposal** computes *ICR 10% maximum 45,457.00* into its labour line. One is a signed agreement and one is a proposal — an auditor will want to know which is which.

DRIVE-AM	60.25% recovered against 10.00% elected
DIG-ENG	179.21% recovered against 10.00% elected
LTM	11.41% recovered against 10.00% elected
HYBRID-II	104.18% recovered against 10.00% elected

2 CFR 200.414(f)

Watch: A high implied rate has **two** readings and the column does not choose: YBI billed above cost, or the classification has not attributed enough cost to that objective. Digital Engineering at 179.21% carries \$207,398.87 of classified cost against \$579,074.25 of billing.

☐ R33 A base that cannot be read is not a base of zero

/restate — Digital Engineering

Digital Engineering bills **one undifferentiated line a month** — *YBI Total: January 2025* — which is **OTHER**, and **OTHER** is not an MTDC category. The route measured a base of zero and reported a variance of exactly \$0.00 on \$579,074.25 of billing. It says **NOT ASSESSABLE** now, which is a different answer and the true one.

billed	\$579,074.25
what the invoice separates	nothing — labour and non-labour are one figure
so the position comes from	the cost record, not the invoice

Watch: Zero and *not measurable from this document* lead to different work, and a reading that cannot tell them apart reports the second as the first every time.

AFTER MONDAY

Sponsor-facing — the reason the five steps exist

Nothing here is a Monday action. It is what the record now supports saying, and in what order.

☐ **R23 Raise the over-collections first, and unprompted**

/restate

Restating produces money to ask for **and** money to give back, and they are two different conversations. Leading with the over-billing is what makes the ask credible; a single net figure hides both and tells a sponsor nothing. The system refuses to compute a net movement for exactly this reason.

DRIVE-AM	12 invoice · billed \$579,240.87 · indirect billed \$0.00 vs supported \$89,314.76
DIG-ENG	7 invoice · billed \$579,074.25 · indirect billed \$0.00 vs supported \$51,248.26
LTM	12 invoice · billed \$368,222.24 · indirect billed \$44,400.00 vs supported \$81,669.78
HYBRID-II	9 invoice · billed \$187,416.05 · indirect billed \$0.00 vs supported \$22,680.85

2 CFR 200.414(f); §4.4 change of basis

Watch: Everything stays PROPOSED until a sponsor says otherwise in writing, and an acceptance has to name the modification that authorised the change of basis.

☐ **R24 Restate the year, not the months**

/restate · docs/WP_AM_2025_RESTATED_INVOICES.md

The 36 monthly documents exist so the year's figure can be **traced** to a month, not filed. Billing and cost do not fall in the same month, by five and six figures — so thirty-six transactions swinging in both directions to net a small figure is the same economics presented in the way most likely to trigger a desk audit.

recovery on the three contracts in 2025	100.9% of fully burdened cost, with 4.06% recorded as indirect — the recovery is inside the loaded labour rate
so a restated invoice	takes the labour line down to wages plus fringe before the indirect line goes on. Keeping both would charge indirect twice.

Watch: The recurring value is indirect on **non-labour**, which a loaded labour rate cannot reach — about \$203,790 a year at 2025 volumes, nineteen times the one-off.

☐ **R25 RATE_METHOD fails on every award, and that is the whole thesis**

/awards — the constraint panel

Each agreement is set to the 10% de minimis and the model applies a negotiated rate. That is not a defect to clear — it is the restatement's central claim, stated as a failing constraint against each executed agreement, which is where a reviewer will want to find it.

AM-DRIVE-AM	award set to DE_MINIMIS_10, model applying NEGOTIATED
AM-HYBRID-P2	award set to DE_MINIMIS_10, model applying NEGOTIATED
AM-ICAM-DIGENG	award set to DE_MINIMIS_10, model applying NEGOTIATED
AM-LTM-PROJ88	award set to DE_MINIMIS_10, model applying NEGOTIATED

[2 CFR 200.414\(f\)](#)

Watch: 200.414(f) charges the de minimis as a rate on MTDC and does not contemplate indirect embedded in an undisclosed loaded labour rate. That makes this a **disclosure** question before it is a recovery question.

☐ **R26 The cost share was obligated and has never been tracked**

/awards — COST_SHARE

The largest untracked obligation in the file. It is a failing constraint now rather than a paragraph in a memo — but nothing in the record evidences a dollar of it, and part of it is partner cost share YBI has to evidence rather than incur.

AM-HYBRID-P2	tracked 0.00 of 104,000.00 required
AM-LTM-PROJ88	tracked 0.00 of 513,065.00 required

[§4.3 of each agreement](#)

Watch: Drive AM's cost share contradicts itself — Schedule B proposes zero and §4.3 names none, while Schedule A expects roughly 1:1 at all times. If the 1:1 reading binds it is another ~\$1.1m. That needs counsel, not arithmetic.

☐ **R27 One invoice bills service outside its award's period**

/awards — TERM

Restating **makes this worse, not better**: it adds an indirect line to a claim that is already outside the period of performance. Settle the term question before the restatement is put to NCDMM, not after.

none failing —

Watch: Every one of the 61 invoices is stamped PAID and states its payment, which settles a question this sheet used to carry open: a restatement is a correction to money already collected, not an additional claim. The bank side is still empty — **receipt** has no rows — so what is recorded is the invoice's own assertion, not a receipt YBI logged.

☐ **R28 Close the Drive AM ODC gap before claiming the largest credit**

/contracts · /classify

Drive AM billed materially more in ODCs than the ledger classifies as Drive AM cost. Either the classification under-attributes and the credit is overstated, or the billing over-claimed and it is understated. **Restating to cost only works if the cost record is complete**, and on the contract with the biggest credit it may not be.

Digital Engineering	seven invoices, \$579,074.25, January to July 2025 — the final one dated 9 July, exactly its period end. This sheet said it had none.
ever invoiced against the ceilings	the 1.6% this sheet used to carry was measured on three invoices; Drive AM, LTM and DE alone billed \$1,526,537.36 in 2025

☐ **R29 The 1099 retainer: a question to answer, not arithmetic to run**

/contracts/people

The contractor's own hours log puts a third of his effort on named programmes, and the retainer sits wholly in G&A. Directly charging what is otherwise an administrative function takes four conditions, and the third — explicitly in the budget, or prior written approval — is exactly what these awards do not have. **The view states the amount and names the objectives; somebody else answers it.**

Metz Consulting, LLC. — retainer	\$73,024.44 over 25 lines, pool G&A
effort on named objectives	35.47% — ESP, HYBRID-II, RISING-TIDES
at stake	\$25,899.83

2 CFR 200.413(c)

Watch: Moving it takes the combined rate **down**, not up — worth knowing before anybody assumes a finding is worth chasing. YBI already direct-charges his project work when it is billed as project work, which is evidence about how the organisation treats this.
